

## ADVANCED FLEXOGRAPHIC PRINTING

Expert level training course

### ABOUT DFTA

DFTA is the Flexographic Technical Association of Germany. We promote the technical status and standing of Flexography through these and other services:

- Flexo technical conferences
- Spreading of news and innovations
- Cooperation with government bodies and other industry associations

The **DFTA Academy**, powered by the **DFTA Technology Center** (DFTA-TZ), is a technical institute dedicated to Flexo printing and located at the Stuttgart Media University in Germany. We offer:

- Flexographic training courses & workshops
- Scientifically managed press experiments
- Technical developments dedicated to the improvement of Flexography in all aspects of print quality and productivity
- Certifications of manufacturing processes etc.

# YOUR BENEFITS

## IMMEDIATE QUALITY AND EARNING BENEFITS

Would you like to print **quality jobs** virtually **effortless**? Participants of our Flexo training courses can!

Back home at their regular job they will immediately improve on their factory's quality output and productivity. They usually act as **multipliers**.

With everybody working according to our top DFTA standards you will **immediately boost print quality, productivity and earnings**, and find yourself going after print jobs that had been believed to be suitable only for competitive printing methods!

# TRAINING COURSE

## GET AWARE OF THE KEY FACTS!

Flexography, undoubtedly, is the most versatile, economical and sustainable printing method used in packaging printing. The quality advancements achieved throughout the past few years also make it the most universal printing method.

In our combined classroom/on-press training sessions we do provide the participants of our training courses with the key facts about all the technical factors of **top quality and high productivity** flexographic printing. On-press sessions will be performed on our own CI press.

We have 20+ years of experience of conducting training courses in Flexo printing.

# PRACTICAL EXERCISE

## GET ON-PRESS EXPERIENCES!

Admittedly, cognition learned in classroom training courses may not be as long-lasting as if gathered through hands-on practice. This is why our training courses consist of a **combination of class and practice**.

We operate a contemporary CI press with 8 colour decks, 1300 mm working width and a maximum speed of 500 m/min, which is being used throughout the training sessions to let the participants have access to the real look, feel and smell of Flexo printing. Furthermore, we do show them our latest homemade developments of performing Flexography with **exceptional print quality at minimal cost!**

Participants master Flexography and may share their knowledge with their colleagues.

Classroom training provides the necessary insights into Flexographic principles, strengths and challenges.

Practical exercises and demonstrations enable the participants to look behind the scenes.
